KANNUR UNIVERSITY

(Abstract)

First and Second Semester Scheme and Syllabus of B.Sc. Computational Mathematics Honours/Honours with Research Programme in tune with KU-FYUGP Regulations 2024 with effect from 2024 Admission onwards- Approved- Implemented- Orders Issued

---

FYUGP Spl.cell

ACAD/FYSC-III/21052/2024 Dated: 19.10.2024

Read:-1. U.O. No. FYUGPSC/FYSC-I/5074/2024, dated: 18/04/2024

2. E-mail of the Chairperson, Board of Studies in Mathematics(UG), on 19.06.2024

3.The Minutes of the Meeting of the Scrutiny Committee held on 21.06.2024

4. E-mail of the Chairperson, Board of Studies in Mathematics(UG), on 24.06.2024

5.The Orders of the Vice Chancellor dtd 24.06.2024

6. The Minutes of the Meeting of the Academic Council, held on 25.06.2024

ORDER

1.The Regulations of the Kannur University Four Year UG Programmes (KU-FYUGP Regulations 2024) for affiliated Colleges was implemented with effect from 2024 admission onwards, vide paper read as (1) above.

2.Subsequently, the Chairperson, Board of Studies in Mathematics(UG) vide paper read as (2) above, submitted the Syllabus of the B.Sc. Computational Mathematics Honours/Honours with Research programme for the first and second semesters in tune with KUFYUGP Regulations 2024 with effect from 2024 admission onwards.

3.Thereafter, the Scrutiny Committee, which included the Dean, Faculty of Science vide paper read as (3) above, scrutinized the Syllabus and recommended suggestions.

4.Subsequently, vide paper read as (4) above, the Chairperson, Board of Studies in Mathematics(UG) forwarded the modified Syllabus of the B.Sc.Computational Mathematics Honours/Honours with Research programme for first and second semesters for approval.

5.Thereafter, the Vice Chancellor ordered to place the same before the Academic Council for consideration, as per the paper read (5) above.

6. Accordingly, the Syllabus of the B.Sc. Computational Mathematics Honours/Honours with Research programme for first and second semesters in tune with KU-FYUGP Regulations 2024 was approved by the meeting of the Academic Council held on 25-06-2024 and granted permission to publish the same, as and when it is ready, after making the necessary modifications, as per paper read as (6) above.

7.Considering the matter in detail, the Vice Chancellor approved the Minutes of the aforesaid meeting of the Academic Council and the Syllabus of the B.Sc.Computational Mathematics Honours/Honours with Research programme for the First and Second Semesters, prepared in tune with KU-FYUGP Regulations, 2024.

8.The approved Syllabus of I and II Semester B.Sc. Computational Mathematics Honours/Honours with Research programme is appended with this U.O. and uploaded in the University website.

Orders are issued accordingly.

FYUG Computational Mathematics Programme in Affiliated colleges under Kannur University -Third to Eighth semester syllabi -Approved and implemented with effect from 2024 Admission-- Orders issued

---

ACADEMIC C SECTION

ACAD C/ACAD C1/21588/2024 Dated: 16.08.2025

Read:-1. U O No. ACAD/FYSC-III/21052/2024 Dated: 19.10.2024

2. Minutes of the meeting of the Board of Studies in Mathematics held on 16.05.2025

3. E mail dated 29.05.2025 from Dr Santhosh C P, Chairperson, BoS, Mathematics (UG).

4. Minutes of the meeting of all Deans of Faculties held on 04.06.2025.

5. Orders of Vice Chancellor in file No. Acad C/Acad C3/2948/2025 Dated 04.06.2025.

ORDER

1. As per the paper read as 1 above, the scheme & first and second semester syllabus of FYUG Computational Mathematics Programme in Affiliated colleges under Kannur University were implemented w.e.f. 2024 admission.

2. The meeting of the Board of Studies in Mathematics(UG) finalised and recommended the remaining semester syllabus of FYUG Computational Mathematics Programme, at its meeting held on 16.05.2025. Subsequently, the Chairperson, BoS in Mathematics (UG) forwarded, vide the paper read as 3 above, the complete syllabus of FYUG Computational Mathematics Programme w e f 2024 admission.

4. Subsequently, the syllabus was forwarded to the Dean, Faculty of Science for verification. The Dean, Faculty of Science vide the paper read as 4 above, recommended to approve the third to eighth semester syllabus of FYUG Computational Mathematics Programme w e f 2024 admission.

5. The Vice Chancellor, after considering the recommendation of the Dean, Faculty of Science and in exercise of the powers of the Academic Council conferred under Section 11(1) Chapter III of Kannur University Act, 1996 and all other enabling provisions read together with, approved the third to eighth semester Syllabus of the FYUG Computational Mathematics programme in Affiliated Colleges under Kannur University and accorded sanction to implement the same w.e.f. 2024 admission, subject to the reporting to the Academic Council.

6. The First to Eighth semester Syllabus of the FYUG Computational Mathematics Programme in Affiliated colleges under Kannur University w.e.f. 2024 admission are appended herewith.

Orders are issued accordingly.

KANNUR UNIVERSITY VISION AND MISSION STATEMENTS

Vision

To establish a teaching, residential and affiliating University and to provide equitable andjust access to quality higher education involving the generation, dissemination and a critical application of knowledge with special focus on the development of higher education in Kasargode and Kannur Revenue Districts and the Manandavady Taluk of Wayanad Revenue District.

Mission

- To produce and disseminate new knowledge and to find novel avenues for application of such knowledge.
- To adopt critical pedagogic practices which uphold scientific temper, the un compromised spirit of enquiry and the right to dissent.
- To up hold democratic, multicultural, secular, environmental and gender sensitive values as the foundational principles of higher education and to cater to the modern notions of equity, social justice and merit in all educational endeavors.
- To affiliate colleges and other institutions of higher learning and to monitor academic, ethical, administrative and infrastructural standards in such institutions.
- To build stronger community networks based on the values and principles of higher education and to ensure the region's intellectual integration with national vision and international standards.
- To associate with the local self-governing bodies and other statutory as well as non-governmental organizations for continuing education and also for building public awareness on important social, cultural and other policy issues.

INTRODUCTION

Kannur University - Four-Year Undergraduate Programme: Backdrop and Context

The implementation of the Four-Year Undergraduate Programme (FYUGP) has been driven by the pressing need to address contemporary challenges ensuring responsive changes to the evolving needs of students, industry, and society at large. Recognizing the curriculum as the cornerstone of any education system, it requires regular refinement to align with evolving socio-economic factors. Higher education must provide students with practical and technical skills relevant to the infields of interest, necessitating the development to a job-oriented curriculum. Despite significant increases in access and expansion of higher education over the years, concerns persist regarding the quality and relevance of educational outcomes, particularly in terms of employability skills. As the world becomes increasingly interconnected, our education system must evolve to instill 21st century skills, enabling students not only to survive but to thrive in this dynamic environment. Moreover, there is a growing need for higher education institutions to embrace social responsibility and contribute to the development of a knowledge society capable of driving sustainable development through innovation. With the central objective of fostering a robust knowledge society to support a knowledge economy, the Government of Kerala has initiated steps to reform higher education. Accordingly, the commissions were established to suggest reforms in higher education policy, legal and regulatory mechanisms, and evaluation and examination systems. It is within this context that a comprehensive reform of the undergraduate curriculum has been proposed, leading to the restructuring of the Four-Year Undergraduate Programme.

KANNUR UNIVERSITY PROGRAMME OUTCOMES

PO1: Critical Thinking and Problem-Solving-

Apply critical thinking skills to analyze information and develop effective problem-solving strategies for tackling complex challenges.

PO2: Effective Communication and Social Interaction-

Proficiently express ideas and engage in collaborative practices, fostering effective interpersonal connections.

PO3: Holistic Understanding-

Demonstrate a multidisciplinary approach by integrating knowledge across various domains for a comprehensive understanding of complex issues.

PO4: Citizenship and Leadership-

Exhibit a sense of responsibility, actively contribute to the community, and show case leadership qualities to shape a just and inclusive society.

PO5: Global Perspective-

Develop a broad awareness of global issues and an understanding of diverse perspectives, preparing for active participation in a globalized world.

PO6: Ethics, Integrity and Environmental Sustainability-

Uphold high ethical standards in academic and professional endeavors, demonstrating integrity and ethical decision-making. Also acquire an understanding of environmental issues and sustainable practices, promoting responsibility towards ecological well-being.

PO7: Lifelong Learning and Adaptability-

Cultivate a commitment to continuous self-directed learning, adapting to evolving challenges, and acquiring knowledge throughout life.

PREFACE

This syllabus serves as a roadmap for academic journey, outlining the courses and objectives designed to cultivate mathematical proficiency and intellectual curiosity.

Mathematics is not merely a collection of techniques and formulae; it is a language for expressing and understanding patterns, structures, and relationships in the world around us. It is the universal language which forms the bedrock of scientific inquiry and technological advancement. As a student embarks on this educational voyage, he/she will explore the beauty and power of mathematical ideas while developing problem-solving skills that are invaluable in both academic and real-world contexts.

This program is structured to provide a comprehensive foundation in core mathematical disciplines, including Algebra, Number Theory, Numerical Analysis, Calculus, Geometry, Abstract Algebra, Linear Algebra, Analysis, Topology, Discrete Mathematics and Programming Languages like Scilab, Python etc. Through a combination of theoretical study and practical applications, students can deepen their understanding of fundamental concepts and sharpen their ability to apply them creatively to solve complex problems.

In addition to core courses, students have the opportunity to tailor their studies through a variety of elective options, allowing to pursue specialized interests in areas such as Artificial Intelligence, Data Science, Optimization, Cryptography, Fuzzy Mathematics, Automata, Mathematical Economics and more, which are necessary to instill 21st century skills.

Also, there is provision to align with interests and career aspirations. Whether passion lies in pure mathematics, applied mathematics, or interdisciplinary fields, one can find courses from Multi-disciplinary/Value-added/Skill-Enhancement courses to suit his/her academic trajectory. Further, assignments, seminars and project work promote self-study and develop research mind in students.

The UG Board of Studies in Mathematics puts forward this syllabus for Four Year Under-Graduate Programme in **Computational Mathematics** for implementation from 2024 onwards. We thank all those who helped us by giving critical suggestions for improvement.

Dr. C.P.Santhosh,

Chairman, UG Board of Studies in Mathematics
Kannur University

PROGRAMMESPECIFICOUTCOMES

PSO1: Understand basic concepts and tools of Mathematical logic, Set theory, Numbertheory,Geometry,Calculus,Vectorcalculus,Algebra,Abstractstructures,Linear Algebra, Laplace transforms, Differential equations, Numerical Analysis, Fourier series, Real Analysis, Complex Analysis, and applications of these concepts in Computer Science.

PSO2: Develop abstract reasoning and critical thinking skills necessary for advanced mathematical study and applications in various fields like Artificial Intelligence, Data Science, Machine Learning etc.

PSO3: Develop proficiency in defining, formulating and solving problems by applying appropriate mathematical methods and principles.

PSO4: Formulate real world problems into mathematical models and find solutions.

PSO5: Develop proficiency in using mathematical software and programming languages.

PSO6: Understand the interdisciplinary nature of Mathematics and apply Mathematical concepts and techniques to solve problems in other sciences.

PSO7: Get equipped with basic research skills.

COURSE CONTENTS

Contents for Classroom Transaction

MODULE	UNIT	DESCRIPTION	HOURS
I	**Functions and Limits**		14
	1	**Functions**	
		a) Exponential functions	
		b) Inverse functions	
		c) Logarithmic functions	
	2	**Limits**	
		a) Limit of a function and limit laws	
		b) Continuity	
		c) Horizontal Asymptotes	
II	**Differentiation of functions and Extreme values of a function**		14
	1	Derivatives and rate of change	
	2	Hyperbolic functions	
	3	Extreme values of a function	
	4	Maximum values	
	5	Minimum values	

	6	The Mean Value Theorem	
III	**Application of derivatives**		14
	1	Shape of graph of a function	
	2	Indeterminate forms	
		a) L 'Hospital rule	
IV	**Optimization problems and antiderivatives**		13
	1	Optimization problems	
	2	Antiderivatives	
V	**Teacher Specific Module**		5
	Directions		
	Summary of curve sketching, graphing with calculus and calculator (Sections 4.5 to 4.6), Illustration of the topic in module I to module IV using software like GeoGebra, Desmos Calculator etc.		

Essential Readings:

1. James Stewart Calculus; Early Transcendentals; 9th Edition; Cengage Learning; 2021.

Module	Unit	Essential Reading No.	Sections	Remarks
I	1	1	Sections 1.4, 1.5	
	2	1	Section 2.2,2.3, 2.5, 2.6	
II	1	1	Section 2.7, 3.11	
	2	1	Sections 4.1, 4.2	
III	1	1	Section 4.3	
	2	1	Sections 4.4	
IV	1	1	Sections 4.7, 4.9	

Suggested Readings:

1. B.S. Grewal; Higher Engineering Mathematics; (43rd edition); Khanna Publishers.
2. G.B. Thomas Jr., M.D. Weir and J.R. Hass; Thomas' Calculus: Early Transcendentals (12th edition); Pearson Education.
3. H. Anton, I. Bivens and S. Davis; Calculus; 10th edition; Willey.
4. S. Narayan and P.K. Mittal; Integral calculus; Revised Edition; S. Chand & Company Ltd.
5. S Narayan and P.K. Mittal; Differential calculus; Revised Edition; S. Chand & Company Ltd.

Assessment Rubrics:

Evaluation Type		Marks
End Semester Evaluation		**70**
Continuous Evaluation		**30**
a)	Test Paper *	12
b)	Assignment	12
c)	Seminar, Viva-Voce	6
Total		**100**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

Course Description

This course provides an elementary introduction to probability and statistics with applications. Topics include random variables, probability distribution *Functions,* Mathematical Expectations, Joint Probability Law and Covariance

Course Prerequisite

Set Theory, Multi-Variable calculus

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Comprehend Basic concepts in Probability	Understand
2	Understand continuous and Discrete Distribution Functions	Understand
3	Understand the Expected value of a Random Variable	Understand
4	Bivariate random variables and joint probability Law	Understand
5	Understand Covariance between two Random variables	Understand
6	Understand Jenson's Inequality	Understand
7	Use software and simulation to do statistics (R).	Apply

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

This course is designed to introduce the concept of group theory and to find solutions of system of linear equations. It also deals with extreme value problems and numerical solutions of transcendental equations.

Course Prerequisite

Matrices

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the basic concepts in group theory	Understand

2	Apply matrix operations to solve system of linear equations.	Apply
3	Apply the concept of derivatives to find extreme values.	Apply
4	Understand how to find solutions of transcendental equations.	Understand

MODULE	UNIT	DESCRIPTION	HOURS
I		**Group Theory**	**14**
	1.1	Binary operations	
	1.2	Groups, Sub groups	
	1.3	Cyclic groups	
	1.4	Groups of Permutations, Orbits, Cycles	
	1.5	Rings & Fields (Definition & Examples only)	
II		**Matrix Theory**	**14**
	2.1	Row-echelon form, Elementary row and column operations	
	2.2	Rank of the matrix	
	2.3	Simultaneous linear equations, Matrix Notations, Theory of solutions	
	2.4	Simplifying operations, Gauss elimination algorithm	
III		**Differential Calculus**	**14**
	3.1	Extreme values of functions	
	3.2	The Mean value theorem	
	3.3	Monotonic functions and the first derivative test	
	3.4	Concavity	
IV		**Numerical Analysis**	**13**

	4.1	Bisection Method	
	4.2	Regula-falsi method	
	4.3	Newton- Raphson Method	
V	**Teacher Specific Module**		**5**
	5.1	Curve sketching, Applied optimization	

Essential Readings

1. John B. Fraleigh, A First Course in Abstract Algebra , Seventh edition. Pearson
2. Richard Bronson, Schaum's outline of Theory and Problems of Matrix operations , Schaum's outline series, McGraw-Hill
3. George B. Thomas, Jr, Mauric D. Weir, Joel Hass, Thomas' Calculus – Early transcendentals Twelfth edition
4. S.K.R. Iyengar, R. K. Jain - Mathematical Methods,Second Edition, Narosa Publications.

Module	Unit	Reference No.	Chapters	Remarks
I	1.1	1	Chapter 1; Section 1.2	All proofs are omitted
	1.2	1	Chapter 1; Section 1.4, 1.5	
	1.3	1	Chapter 1; Section 1.6	
	1.4	1	Chapter 2; Section 2.8, 2.9	
	1.5	1	Chapter 4; Section 4.18 (Relevant topic)	
II	2.1	2	Related Topics and problems in Chapter 1	
	2.2	2	Related Topics and problems in Chapter 1	
	2.3	2	Related Topics and problems in Chapter 2	
	2.4	2	Related Topics and problems in Chapter 2	
III	3.1	3	Chapter 4; Section 4.1	All proofs are omitted
	3.2	3	Chapter 4; Section 4.2	
	3.3	3	Chapter 4; Section 4.3	
	3.4	3	Chapter 4; Section 4.4(Relevant topics)	
IV	4.1	4	Chapter 3; Section 3.3	
	4.2	4	Chapter 3; Section 3.4	
	4.3	4	Chapter 3; Section 3.5	
V		1	Chapter 4; Section 4.4 (Relevant topics) Section 4.6	

Suggested Readings

1. Joseph A. Gallian, Contemporary Abstract Algebra, Forth edition, Narosa Publications.
2. Erwin Kreyszig, Advanced Engineering Mathematics, Tenth edition, Wiley publication
3. B. S Grewal, Higher Engineering Mathematics, Forty second edition, Khanna publishers.
4. James Stewart, Daniel Clegg, Saleem Watson, Calculus Early transcendentals, Ninth edition, Cengage

SEMESTER - 2

KU2DSCCMT101: COMPUTATIONAL CALCULUS - II

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
2	DSC	100	KU2DSCCMT101	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description

In this course the student will learn the definite integral of a function, techniques to evaluate trigonometric integrals, and applications of integration. Also to approximate the value of a definite integral using the different methods of numerical integration.

Course Prerequisite

Integrals of basic functions and rules of integration

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the fundamental theorem of calculus and apply it to find the derivatives and integrals of certain functions.	Understand, Apply
2	Apply the notion of definite integrals to find area between curves, volumes using cross-sections, arc length and areas of surfaces of revolution	Apply
3	Understand integration by successive reduction and apply reduction formulas to evaluate trigonometric integrals	Understand, Apply

4	Understand the concept of polar coordinates and apply it to find areas under thecurves and length of curves	Understand, Apply
5	Understand numerical integration and apply the different numerical integration methods to approximate the value of a definite integral.	Understand, Apply

MODULE	UNIT	DESCRIPTION	HOURS
I		**Integrals and it's applications**	**14**
	1	a) Definite integral,	
		b) The Fundamental theorem of Calculus,	
		c) Indefinite integrals and the Net change theorem	
	2	**Application of Integration**	
		a) Area between curves	
II		**Application of Integration,Reduction formulas and trigonometricIntegrals**	
	1	**Applications of Integration**	
		a)Volumes,	

		b) Volumes by cylindrical shells	**14**
		c) Work	
		d) Average value of a function,	
	2	**Reduction formulas and trigonometric Integrals**	
		a) Reduction formulas and corresponding problems (From the exercise only)	
		b) Trigonometric integrals	
III	**Further applications of integration, Polar Co-ordinates**		**14**
	1	**Applications of integration**	
		a) Arc length	
		b) Area of a surface of revolution	
	2	**Polar Coordinates**	
		a) Polar Coordinates	
		b) Areas and Lengths in Polar Coordinates	
IV	**Numerical Integrations.**		**13**
	1	a) Numerical Integration,	
		b) Left End Points, Right End Points and Midpoint Sums	
		c) Trapezoidal Sums	
		d) Simpson's Rule	
		e) Gaussian Quadrature	
V	**Additional Topic offered by teacher**		**5**
	Directions		
	Discuss the geometry of problems solved in Unit I to Unit III using various software like Geogebra, Desmos Calculator etc.		
	Relevant Problems in Unit IV from the reference books to be discussed		

Essential Readings:

1. James Stewart,Daniel Clegg, Saleem Watson; Calculus Early Transcedentals -Metric version; 9th Edition; Cengage Learning 2021.

2. William C. Bauldry; Introduction to computational Mathematics; First edition; CRC Press.

Reference Distribution:

Module	Unit	Essential Reading No.	Sections	Remarks

Assessment Rubrics:

Evaluation Type		**Marks**
End Semester Evaluation		**70**
Continuous Evaluation		**30**
a)	Test Paper *	12
b)	Assignment	12
c)	Seminar, Viva-Voce	6
Total		**100**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

** **Use of Scientific Calculators below 100 functions (that is, upto*fx 99*) shall be permitted.**

KU2DSCCMT113: MATHEMATICS FOR DATA SCIENCE - II

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
II	DSC	100	KU2DSCCMT113	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

This course is designed to introduce vector space, random variables ,partial derivatives and to find extreme values of functions of two or more variables. It also include iteration methods to solve system of linear equations.

Course Prerequisite

KU1DSCCMT111: Mathematics for Data Science 1

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of solving system of linear equations using iteration method.	Understand
2	Understand the basic concepts of linear algebra.	Understand
3	To extend the concept of limit continuity and differentiability to more than one variables.	Understand
4	Apply Lagrange's multipliers to find extreme values	Apply
5	Understand discrete and continuous random variables and its probability distribution	Understand

MODULE	UNIT	DESCRIPTION	HOURS
I		**Numerical Analysis**	14
	1.1	LU decomposition	
	1.2	Gauss Jacobi iteration method	
	1.3	Gauss – Seidel iteration method	
II		**Linear Algebra**	**14**
	2.1	Vector spaces	
	2.2	Subspaces	
	2.3	Linear combinations and system of linear equations	
	2.4	Linear dependence and Linear independence	
	2.5	Basis and Dimension	
III		**Partial Derivatives**	**14**
	3.1	Functions of severable variable	
	3.2	Partial derivatives	
	3.3	Chain Rule	
	3.4	Extreme values and saddle points	

	3.5	Lagrange's multipliers	
IV	**Random Variables & Distribution Functions**		
	4.1	Random variable – continuous and discrete random variable	
	4.2	Discrete probability distribution, mean and variance of random variables	
	4.3	Theoretical distribution	
	4.4	Binomial probability distribution	
	4.5	Poisson distribution	
	4.6	Normal distribution	
V	**Teacher Specific Module**		5
		Visualization of Distribution Functions.	

Essential Readings

1. S.K.R. Iyengar, R. K. Jain - Mathematical Methods, Second Edition, Narosa Publications.
2. Stephen H. Friedberg, Arnold J. Insen, Lawrence E. Spence, Linear Algebra, Forth edition, Pearson Education.
3. George B. Thomas, Jr, Mauric D. Weir, Joel Hass, Thomas' Calculus – Early transcendentals Twelfth edition
4. N.P. Bali, Dr. Manish Goyal , A textbook of Engineering Mathematics Ninth Edition Lakshmi Publications.

Module	Unit	Reference No.	Chapters	Remarks
I	1.1	1	Chapter 1; Section 1.6.2	
	1.2	1	Chapter 1; Section 1.7.1	
	1.3	1	Chapter 1; Section 1.7.2	
II	2.1	2	Chapter 1; Section 1.2	All proofs are omitted
	2.2.	2	Chapter 1; Section 1.3	
	2.3	2	Chapter 1; Section 1.4	
	2.4	2	Chapter 1; Section 1.5	
	2.5	2	Chapter 1; Section 1.6	
III	3.1	3	Chapter 14; Section 14.1	All proofs are omitted

SEMESTER - 3

KU3DSCCMT201: INTRODUCTION TO GEOMETRY AND ANALYSIS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
III	DSC	200	KU3DSCCMT201	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description

This course is to introduce the notion of sequences and series, convergence tests of sequences and series in analysis and different coordinate systems such as polar coordinate

system, cylindrical coordinate system, spherical coordinate system and sketching of cylinders and quadratic surfaces in analytic geometry.

Course Prerequisite

Elementary calculus including Functions, limits, integrals and geometric concepts including Cartesian coordinate system, lines, planes.

Course Outcomes

CO No	Expected Outcome	Learning Domains
1	Understand sequences, series and their convergence and divergence.	Understand
2	Apply convergence tests to sequences and series to test convergence	Apply
3	Understand the conics : Parabola, Ellipse and Hyperbola	Understand
4	Understand Cylindrical coordinate system and spherical coordinate system.	Understand
5	Understand the cylinders and quadratic surfaces	Understand
6	Identify the cylindrical surfaces and quadratic surfaces.	Understand
7	Sketch the graph of cylinders and quadratic surfaces	Apply

Mapping of Course Outcomes to PSOs

COURSE CONTENTS

Contents for Classroom Transaction

MODULE	UNIT	DESCRIPTION	HOURS
I	**Sequences and series**		14
	1	Sequences	
		a) Infinite sequences	
		b) The limit of a sequences	
		c) Properties of convergent sequences	
		d) Monotonic and bounded sequences	
	2	**Series**	
		a) Infinite series	
		b) Geometric series	
		c) Test for divergence	
		d) Properties of convergent series	
		e) Integrals Test and estimates of sum	
		f) The direct comparison test and Limit comparison test	
II	**Alternating series, Absolute Convergence and Convergence tests for series**		14
		Alternating series and Absolute convergence	
	1	a) Alternating series	
		b) Estimating sum of Alternating series	
		c) Absolute convergence and conditional convergence	
		d) Rearrangements	
	2	a) Ratio and Root tests	
	3	a) Strategy for testing series	
III	**Conics, Cylindrical and Spherical coordinates**		14
	1	**Conics**	
		a) Parabola	
		b) Ellipses	
		c) Hyperbolas	
		d) Shifted conics	

	2	**Cylindrical coordinates and Spherical coordinates**	
		a) Cylindrical coordinates	
		b) Spherical coordinates	
IV	**Cylinders and Quadric surfaces**		
	1	a) Cylinders	
	2	a) Quadric surfaces	13
		b) Application of quadric surfaces	
V	**Teacher Specific Module**		
	Polar curves, Symmetry of polar curves, Conics sections in polar curves, Polar equations of conics.		**5**

Essential Readings:

1. Games Stewart, Daniel Clegg, Saleem Watson, Calculus: Early Transcendentals (9^{th} edition) (Cengage)

Reference Distribution:

Module	Unit	Essential Reading No.	Sections	Remarks
I	1	1	Section 11.1	Proof of all theorems Omitted

Course Description

This course is designed to understand the concept of Python programming and solving mathematical problems related with symbolic computations

Course Prerequisite

Operating a Computer, A Basic Course in Calculus and Higher Secondary Linear Algebra

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the fundamentals to advanced Python programming concepts	Understand
2	Develop proficiency in sympolic computation with SymPy	Understand
3	Develop skills to solve numerical problems in Mathematics using Python	Understand

Mapping of Course Outcomes to PSOs

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	✓	✓					
CO 2	✓	✓	✓

COURSE CONTENTS

Contents for Classroom Transaction

MODULE	UNIT	DESCRIPTION	HOURS
I		**Introductory Python**	11
	1.1	Getting started with Python, Variables and Data Types, Keywords, Operators and their Precedence, Python String, Python Lists, Mutable and Immutable Types	
	1.2	Input from the Keyboard, Iteration: while and for loops, Conditional Execution: if, elif and else, Modify loops: break and continue, Line Joining, Exercises	
II		**Advanced Programing in Python**	11
	2.1	Functions, More on Strings and Lists, Python Modules and Packages, File Input/Output, Formatted Printing, Exception Handling	
	2.2	The Numpy Module, Vectorized Functions	
III		**Data Visualization**	11
	3.1	The Matplotlib Module, Plotting Mathematical Functions, Famous Curves, Power Series, Fourier Series	
	3.2	2D plot using colours, Fractals, Meshgrids, 3D Plots, Mayavi, 3D Visualization, Exercises	
IV		**Numerical Methods**	12
	4.1	Derivative of a function, Numerical Integration, Ordinary Differential Equations	

	4.2	Polynomials, Finding roots of an equation, System of linear equations, Interpolations, Exercises	
V	**Teacher Specific Module**		**30**
	5.1	Evaluate a Taylor series numerically	
	5.2	Interpolate a function using	
	a) Newton's forward interpolation b) Newton's backward interpolation c) Lagrange's interpolation d) Newton's general interpolation		
	5.3	Find integrals of functions using	
	a) Trapezoidal rule b) Simpson's 1/3-rule		
	5.4	Find derivative of function numerically	
	5.5	Solve first order differential equations numerically	
	a) Euler method b) Fourth order Runge-Kutta method		
	5.6	Solve algebraic equations numerically	
	a) The Bisection method b) Regula Falsi method		
	5.7 Various vector operations such as dot product, cross product and divergent using numpy module		
	5.8 Various matrix operations such as determinant, inverse and transpose using numpy module		
	5.9 Solve system of linear equations using numpy module		

Essential Readings

1. Ajith Kumar B. P, Python for Education, Inter University Accelerator Centre- New Delhi, 2010

Reference Distribution

Module	Unit	Reference No.	Chapters	Remarks
I	1.1	1	Chapter 2; Sections 2.1-2.6	
	1.2	1	Chapter 2; Sections 2.7-2.12	
II	2.1	1	Chapter 2; Sections 2.13-2.18	
	2.2	1	Chapter 3; Sections 3.1-3.2	
III	3.1	1	Chapter 4; Sections 4.1-4.5	
	3.2	1	Chapter 4; Sections 4.6-4.11	
IV	4.1	1	Chapter 6; Sections 6.1-6.3	
	4.2	1	Chapter 6; Sections 6.4-6.6, 6.8,6.9	
V		1	Relevant Chapters from the Book	

Suggested Readings

1. Eric Matthes, Python Crash Course : A hands-on project based introduction to programming- 3rd edition, no starch press, 2023
2. Wes Mckinney, Python for Data Analysis, O'Reilly Media Inc, 2022
3. Robert Johansson, Numerical Python: A Practical Technique Approach for Industry, Apress, 2015
4. Amit Saha, Doing Math with Python, No Starch Press, 2015
5. Vernon L Ceder, The Quick Python Book, Second Edition, Manning
6. Python tutorial online, https://www.geeksforgeeks.org/python-programming-language/

Evaluation Type		**Marks**
End Semester Evaluation (ESE)		**65 (50T+15P)**
Continuous Evaluation(CCA)		**35 (25T + 10P)**
Theory		
a)	Test Paper *	10
b)	Assignment	10
c)	Viva-Voce, Seminar	5
Practical		
a)	Skill	4
b)	Record	4
c)	Punctuality	2
Total		**100**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

** **Use of Calculators shall not be permitted.**

Course Description

This course is designed to introduce basic concepts in graph theory,linear transformation and to understand the mathematical modelling of linear programming problems and its graphical solution. It also aims to identify the correlation between two variables.

Course Prerequisite

KU2DSCCMT113-Mathematics for Data Science -II

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the formulation of linear programming problems mathematically	Understand
2	Apply graphical method to solve linear programming problems	Apply
3	Understand linear transformation and its matrix representation	Understand
4	Apply matrix operations to find eigen values and eigen vectors.	Apply
5	To understand the basic concepts of graph theory	Understand

6	Identify the relationship between two variables	Apply

MODULE	UNIT	DESCRIPTION	HOURS
I		**Linear Programming Problems**	**14**
	1.1	Structure of Linear programming model	
	1.2	General mathematical model of Linear programming problems	
	1.3	Guidelines on Linear programming model formulation	
	1.4	Linear Programming: Graphical method	
II		**Linear Algebra**	**14**
	2.1	Linear Transformations, Null Spaces, and Ranges	
	2.2	The Matrix Representation of a Linear Transformation	
	2.3	The change of coordinate matrix	
	2.4	Eigenvalues and Eigenvectors	
	2.5	Inner Products and Norms	
III		**Graph Theory**	**14**
	3.1	Definitions and Examples	
	3.2	Subgraphs, Complements and graph isomorphisms	

	3.3	Vertex degree: Eulers- trails and circuits.	
IV	**Correlation & Regression**		**13**
	4.1	Correlation	
	4.2	Scatter or dot diagrams	
	4.3	Karl Pearson's co-efficient of correlation	
	4.4	Computation of Correlation co-efficient.	
	4.5	Regression, Linear regression, Lines of regression.	
	4.6	Properties of regression co-efficient.	
V	**Teacher Specific Module**		5
		Dijkstra's – Shortest path algorithm	

Essential Readings

5. J K Sharma, Operations Research Theory and Applications, Sixth edition, (Trinity press)
6. Stephen H. Friedberg, Arnold J. Insen, Lawrence E. Spence, Linear Algebra, Forth edition, Pearson Education.
7. Ralph- P. Grimaldi, Discrete and Combinatorial Mathematics an Applied introduction, Third edition, Addison- Wesley publishing Company.
8. N.P. Bali, Dr. Manish Goyal , A textbook of Engineering Mathematics Ninth Edithion Lakshmi Publications.

Module	Unit	Reference No.	Chapters	Remarks

4			30	70	100	2

Course Description

This course is to introduce Laplace Transforms, Fourier Series, partial Differential Equations, methods to solve ordinary and partial differential equations as well as integral equations

Course Prerequisite

Integration and Differentiation

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand Laplace Transforms	Understand
2	Apply Laplace Transforms to find solution of Initial value problems	Apply
3	Demonstrate Fourier Series to study the behaviour of periodic functions	Understand
4	Understand the formation and solutions of P.D.E of first and higher order	Understand
5	Apply various methods to obtain solutions to P.D.E. of first and second order which occur in Science and Engineering	Apply
6	Understand Fourier transforms	Understand

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description

This course aims to provide a comprehensive introduction to the fundamental concepts and structures in Group Theory.

Course Prerequisite

Elementary Algebra including sets, relations, functions, equations and basic algebraic structures.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Comprehend the binary operations and their properties in the context of group theory	Understand
2	Recognize and explain the fundamental properties of groups, such as closure, associativity, identity and inverses	Understand
3	Classify and work with finite groups, understanding their structure and significance	Apply
4	Identify and prove isomorphisms between groups, recognizing the importance of structural similarities	Apply
5	Comprehend the notion of subgroups, including the criteria for a subset to be a subgroup	Understand
6	Comprehend the cyclic groups, understanding their generation and properties	Understand
7	Apply Lagrange's theorem to various problems, particularly in the context of finite groups and permutation groups	Apply

Learning Approach (Hours/ Week)	Marks Distribution	Duration of

Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	ESE (Hours)
4		1	30	70	100	2

Course Description

This course is to introduce the notion of multivariable functions, their limits, continuity, partial derivatives and multiple integrals and to discuss applications of double and triple integration.

Course Prerequisite

1. Limit and continuity of single variable function.
2. Differentiation and integration of single variable function.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of multivariable functions, their limit and continuity	Understand
2	Understand the concept of Partial derivative and apply it to functions	Understand, Apply
3	Understand the concept of directional derivative and gradient vector.	Understand
4	Apply the concept of gradient vectors to find maxima and minima.	Apply
5	Understand double and triple integrals, and apply multiple integrals to find surface area	Understand, apply
6	Understand spherical and cylindrical coordinates	Understand

SEMESTER - 5

KU5DSCCMT301: REAL ANALYSIS - I

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
V	DSC	300	KU5DSCCMT301	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

This course aims to introduce properties of real line $\mathbb{R}$., basic concepts and techniques of real analysis. Also it aims to introduce real sequences, subsequence and to establish convergence of sequences using theorems.

Course Prerequisite

KU3DSCCMT201: INTRODUCTION TO GEOMETRY AND ANALYSIS

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Recognize the fundamental properties of the real numbers, including algebraic, order and completeness properties of R.	Knowledge
2	Identify sequences in terms of functions from $\mathbb{N}$ to a subset of $\mathbb{R}$ and find the limit	Understand
3	Classify whether a sequence is bounded , convergent, divergent, monotone and Cauchy	Understand
4	Apply the Archimedean property and the density theorem in real numbers	Apply
5	Apply Bolzano Weierstrass Theorem and the Cauchy's convergence criterion in real sequences	Apply

End Semester Evaluation		**70**
Continuous Evaluation		**30**
a)	Test Paper *	12
b)	Assignment	12
c)	Seminar, Viva-Voce	6
Total		**100**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

KU5DSCCMT302: ALGEBRA AND LINEAR ALGEBRA

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
V	DSC	300	KU5DSCCMT302	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

This course is to introduce the notion of multivariable functions

Course Prerequisite

1. Binary Operation. 2. Group Theory.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of Rings and Fields	Understand
2	Apply the concept of Rings and Fields to solve Linear Congruence.	Understand, Apply
3	Understand the concept of Vector Space.	Understand
4	Understand the concept of Basis and Dimension.	Understand
5	Understand the concept of Linear Transformation.	Understand

4			30	70	100	2

Course Description

This course is to introduce the concept of vector valued functions, their differentiation and integration. The course also discuss the line integrals and surface integrals of vector fields and the techniques to evaluate them.

Course Prerequisite

1. Multiple integrals2.Polar coordinates, Spherical coordinates, cylindrical coordinates.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of Parametric curves	Understand
2	Understand the concept of Vector functions, their derivatives and integrals.	Understand,
3	Understand the concept of vector fields and evaluate the line integrals of vector fields	Understand, Apply
4	Understand curl ,divergence and surface, integrals of vector fields	Understand,
5	Apply Green's theorem, Stokes theorem, Divergence theorem to evaluate integrals.	Apply

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description:

Formal languages and automata theory deals with the concepts of automata, formal languages, grammar, and computability. Automata theory provides a simple, elegant view of the complex machine that we call a computer. This course gives a pathway to advanced studies in theoretical computer science.

Course Prerequisite:

Basics in discrete mathematics.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	To provide basic understanding of Discrete Mathematics	Understand
2	To connect regular expressions, Languages and automata	Understand, Apply
3	Develop the ability to categorise different types of mathematical models of computation.	Analyse, Skill
4	To develop the skill of solving real life problems through mathematical modelling	Apply

4			30	70	100	2

Course Description

This course is one of the mathematical foundations for machine learning. It aims to understand linear transformation, diagonalisation of a square matrix, inner products and orthogonal diagonalisation of symmetric matrices which are essential to learn basic concepts in machine learning.

Course Prerequisite

KU5DSCCMT302: ALGEBRA AND LINEAR ALGEBRA

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Explain what is meant by a linear transformation and be able to prove a given mapping is linear.	Understand
2	Identify the range and null space and determine rank, nullity of a linear transformation.	Understand
3	Find the matrix representation of a transformation with respect to two given bases.	Understand

4	Compute eigenvalues and eigenvectors for a square matrix.	Apply
5	Determine whether or not a matrix can be diagonalised and diagonalise a diagonalisable matrix.	Apply
6	Acquire the concept of inner product on a vector space.	Understand
7	Apply Gram-Schmidt orthonormalisation process	Apply
8	Identify orthogonal diagonalisation	Understand
9	Classify the quadratic form as positive definite, positive semi-definite, negative definite, negative semi- definite and indefinite.	Apply

KU6DSCCMT302: ADVANCED OPTIMIZATION TECHNIQUES

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
VI	DSC	300	KU6DSCCMT302	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description:

At the end of the course the student will be able to find a basic feasible solution of Transportation problem and a minimum transportation Schedule. This course also discusses methods to find shortest path in a network and the mathematics required to solve different types of games.

Course Prerequisite:

1. Distribution Function 2. Elementary row operations of Matrices.

.

Course Outcomes :

CO No.	Expected Outcome	Learning Domains

1	Understand, formulate and solve a transportation problem and find the minimum transportation cost.	Understand, Apply
2	Able to find shortest path in a Network	Understand
3	Understand the concept of CPM and PERT	Understand, Apply
4	Understand how optimal strategies are formulated in competitive environment.	Understand
5	Apply various methods to select the optimal strategies to win the game	Apply

MODULE	UNIT	DESCRIPTION	HOURS
I	**Transportation Problem**		14
	1	a) Formulating Transportation Problem.	
		b) Finding Basic Feasible Solutions for Transportation Problems	
		c) The Transportation Simplex method	

		d) Sensitivity analysis for Transportation problem	
II	**Networking in Project Planning**		**14**
	1	e) Introduction	
		f) Network	
		g) Numbering the event or labeling	
		h) Algorithm for framing a Network	
		i) Critical Path Method	
		j) Critical Path Analysis	
		k) Project Evaluation and Review Technique	
		l) Distinction between CPM and PERT	
III	**Theory of Games**		**14**
	I	e) Introduction	
		f) Game	
		g) Strategy	
		h) Two-Person zero-sum games	
		i) Payoff Matrix	
		j) The Maxmin and Minimax principles	
		k) Saddle point and value of the game	
		l) Algorithm for determining a saddle point	
		m) Game without a saddle point-mixed strategy	
		n) Technique for mixed strategy	
		o) Saddle point of a function	
IV	**Solving different types of Matrix Games**		**13**
	1	a) Solution of a 2x2 rectangular games without a saddle point	
		b) Dominance property	
		c) General rules for Dominance	

		d) Algebraic method for solving m x n games	
		e) Symmetric game	
		f) Graphical method of solution of 2 x n or m x 2 games	
V	**Teacher Specific Module**		**5**
	Directions		
	Problems of Module 1 from Text 1		

Essential Readings:

KU6DSECMT301: COMPLEX ANALYSIS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
VI	DSE	300	KU6DSECMT301	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description

This course is to introduce Complex Analysis as an extension of Real Analysis by extending the familiar real calculus to complex calculus by introducing complex numbers and functions.

Thus, in certain ways, problems that are difficult to solve in real calculus may be much easier to solve in complex analysis. Complex analysis is important in applied mathematics for three main reasons

1. Two-dimensional potential problems can be modelled and solved by methods of analytic functions. This reason is the real and imaginary parts of analytic functions satisfy Laplace's equation in two real variables.

2. Many difficult integrals (real or complex) that appear in applications can be solved quite elegantly by complex integration.

3. Most functions in engineering mathematics are analytic functions, and their study as functions of a complex variable leads to a deeper understanding of their properties and to interrelations in complex that have no analogue in real calculus.

Course Prerequisite

Basic idea of Complex numbers, algebra of complex numbers, powers and roots.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of Analytic Functions, Cauchy–Riemann Equations, Laplace's Equation, Harmonic functions and Harmonic conjugates,	Understand
2	Understand the concept of Exponential Function, Trigonometric Functions,Hyperbolic Functions, Logarithmic functions and General Power of complex numbers	Understand Apply
3	Understand the concept of line integral in the complex plane,Cauchy's integral theorem , Cauchy's integral formula and derivatives of analytic functions	Understand, Apply
4	Understand how to apply convergence of Sequences and Series of complex numbers and functions.	Understand, Apply
5	Understand power series, functions given by power series, Taylor series, Maclaurin's Series and Laurent Series	Understand, Apply
6	Understand singularities and zeros of complex functions	Understand, Apply
7	Understand residue integration method	Understand, Apply

KU6DSECMT302: REAL ANALYSIS II

Semester	Course Type	Course Level	Course Code	Credits	Total Hours

VI	DSE	300	KU6DSECMT302	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

In this course the student will learn the basic concepts and techniques of Real Analysis. It starts from infinite series, convergence, tests for convergence, Absolute convergence, and conditional convergence. Continuous functions and the fundamental properties of continuous functions on intervals, uniform continuity are also discussed. This course also discuss the Riemann Integrals, properties classes of Riemann Integrable functions and the Fundamental theorem of calculus

Course Prerequisite

Sequences, convergence and test for convergence of sequence.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the Infinite Series, Convergence of the series and tests for the convergence. Also apply it to test the convergence of the given series.	Understand, Apply
2	Understand the concepts of Absolute convergence and conditional convergence and apply these concepts to given series.	Understand, Apply
3	Understand the various tests for Absolute convergence and non absolute convergence apply them to test the convergence of a given series	Understand, Apply
4	Understand the concept of continuous functions and its properties, combinations, uniform continuity and apply the various problems involving continuity.	Understand, Apply
5	Understand the concept of Riemann integration, its properties, Fundamental theorems of calculus and apply them in problems and theorems involving integration	Understand, Apply

MODULE	UNIT	DESCRIPTION	HOURS
I	**Infinite series**		**14**
	1	Introduction to infinite series	
		a) The n^{th} term test	
		b) Cauchy criterion for series	
		c) The comparison tests	
	2	**Absolute convergence**	
		a)Absolute convergence	
		b)Conditional convergence	
		c)Grouping and Re-arrangement of series	
	3	**Test for absolute convergence**	

		a)Limit comparison test II(with out proof)	
		b) Root and ratio test(with out proof)	
		c) Integral test (with out proof)	
		d) Raabe's test 9 with out proof)	
	4	**Test for non absolute convergence**	
		a) Alternating series test	
		b) The Dirichlet and Abel test	
II	**Continuous Functions**		**14**
	1	**Continuous Functions**	
		a) Continuous Function	
		b) Sequential criteria for continuity	
		c) Discontinuity criteria	
	2	**Combination of continuous functions**	
		a) Combination of continuous functions and examples	
		b) Composition of continuous functions and examples	
	3	**Continuous function on intervals**	
		a) Boundedness theorem (without proof)	
		b) Maximum- Minimum theorem (without proof)	
		c) Location of roots theorem(Without proof)	
		d) Bolzano's intermediate value theorem	
		e) Preservation of intervals theorem	

III	**Uniform Continuity**		**14**
	1	**Uniform continuity**	
		a) Uniform continuity	
		b) Uniform continuity theorem	
	2	**Lipschitz functions**	
		a) Lipschitz function	
		b) Continuous Extension Theorem.	
IV	**The Riemann Integral.**		**13**
	1	**Riemann Integral**	
		a) Definition of Riemann Integral and examples	
		b) Properties of Riemann Integral	
		c) Boundedness Theorem.	
	2	**Riemann Integrable functions**	
		a) Cauchy criteria(without proof)	
		b) The Squeeze theorem (Without proof)	
		c) Classes of Riemann integrable functions	
		d) Additivity theorem (Without proof)	
	3	**The Fundamental theorem**	
		a) The Fundamental theorem of calculus first form	
		b) The Fundamental theorem of calculus second form	
		c) Substitution theorem.	

V	**Additional Topic offered by teacher**	
	Directions	
	a) Illustrations of the tests for convergence series	5
	b) Illustrated Examples and counter examples for the topics in continuous functions	
	c) Illustrated Examples of Riemann Integrable functions

4		1	30	70	100	2

Course Description

This course is to introduce the concept of Linear Transformation and matrix properties of its related matrix.

Course Prerequisites: Matrix Theory, Vector Space , Basis

Course Outcomes

CO NO.	EXPECTED OUTCOME	LEARNING DOMAINS
1	Understand the concept of Linear Transformation.	Understand
2	Apply the concept of Matrix related to Linear transformation.	Understand, Apply
3	Understand the concept of Double Dual and Transpose.	Understand
4	Understand the concept of Diagonalisation.	Understand
5	Understand the concept of Characteristic Values	Understand

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4			30	70	100	2

Course Description

In this course the student will learn the basic concepts and techniques of Topology. It starts from basic definition of topology, different topologies, basis, sub basis, subspaces, metric spaces, product spaces, continuous functions and homeomorphism. This also helps to understand topology as a general tool for analysis.

Course Prerequisite

Set theory, functions, order relations and basic concepts of metric spaces.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand topology, compare topologies, and distinguish different topologies.	Understand,Apply
2	Understand basis and sub basis, compare topologies using basis and sub basis.	Understand,Apply
3	Construction of new topologies from existing topologies – product topology, subspace topology, geometry of the product topology.	Understand,Apply
4	Understand and identify closed sets, open sets, limit points and continuous functions.	Understand,Apply
5	Compare and distinguish the product topology and box topology.	Understand,Apply

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4		1	30	70	100	2

Course Description

This course offers an introduction to measure theory, the field of mathematics that is the mathematical foundation of probability theory. It also has applications in functional analysis and other areas. The following concepts will be introduced: sigma-algebras, measures, measurable functions and Lebesgue integrals. We shall see how a series can be interpreted as an integral! Additionally we will discuss the most important convergence theorems.

Course Prerequisite

KU7DSCCMT403 : MATHEMATICAL ANALYSIS

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of Lebesgue measurable sets and constriction of non measurable sets.	Understand
2	Understand the concepts of measurable functions.	Understand
3	Mastery in the general Lebesgue's integral and its properties	Apply
4	Understand the concepts of abstract measure space	Understand
5	Understand the concept of integration with respect to measure	Understand

MODULE	UNIT	DESCRIPTION	HOURS
I		**First-order equations**	14
		Introduction	
		Quasilinear equations	
		The method of characteristics	
		Examples of the characteristics method	
		The existence and uniqueness theorem	
		The Lagrange method	
		General Nonlinear equations	
		Exercises	
II		**Second-order linear equations in two independent variables**	14
		Classification	
		Canonical form of hyperbolic equations	
		Canonical form of parabolic equations	
		Canonical form of elliptic equations	
		The one-dimensional wave equation	
		Introduction	

III		Canonical form and general solution	14
		The Cauchy problem and d'Alemberts formula	
		Domain of dependence and region of influence	
		The Cauchy problem for the nonhomogeneous wave equation	
IV		**The method of separation of variables**	13
		Introduction	
		Heat equation: homogeneous boundary condition	
		Separation of variables for the wave equation	
		Separation of variables for nonhomogeneous equations	
		The energy method and uniqueness	
		Further applications of the heat equation	
V		**Teacher Specific Module**	5
		Variational Methods	

Essential Readings

1. YehudhaPinchover and Jacob Rubienstein; *An Introduction to Partial Differential Equations*; Camridge University Press; 2005

Reference Distribution

Module	Unit	Reference No.	Chapters	Remarks
I		1	Chapter 2.1-2.6,2.9,2,10	
II		1	Chapter 3	
III		1	Chapter 4	
IV		1	Chapter 5	
V		1	Chapter 10	

Suggested Readings

1. Amaranath T; *Partial Differential Equations;*Narosa; 1997.
2. A. Chakrabarti; *Elements of ordinary Differential Equations and special functions;* Wiley Eastern Ltd; 1990
3. E.A. Coddington; *An Introduction to Ordinary Differential Eqution;* Printice Hall of India; 1974
4. R. Courant and D. Hilbert; *Methods of Mathematical Physics*-Vol I; Wiley Eastern Reprint; 1975

MULTIDISCIPLINARY COURSES

SEMESTER - 1

KU1MDCCMT101: LOGIC, LATTICES AND BOOLEAN ALGEBRA

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
I	MDC	100	KU1MDCCMT101	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3		1	25	50	75	1.5

Course Description

This course is designed to understand the concept of Sets and lattices and its applications in Boolean Algebra.

Course Prerequisite

Sets, Relations, Functions.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the Concept of Logic	Understand
2	Understand the concept of Lattices	Understand
3	Understand the concept of Boolean Algebra	Understand
4	Apply Representation Theorem.	Understand

MODULE	UNIT	DESCRIPTION	HOURS
I		**Logic and Propositional Calculus**	11
		Introduction	
		Proposition and Compound Statements	
		Basic Logical Operations	
		Propositions and Truth Tables	
		Tautologies and Contradictions	
II		Logical Equivalence	11
		Algebra of Propositions	
		Conditional and Biconditional Statements	
		Arguments	

		Propositional Functions, Quantifiers	
		Negation of Quantified Statements	
III		**Ordered Sets and Lattices**	11
		Introduction	
		Ordered Sets	
		Hasse Diagrams of Partially Ordered Sets	
		Consistent Enumeration	
		Supremum and Infimum	
IV		Isomorphic (Similar) Ordered Sets	12
		Well- Ordered Sets	
		Lattices	
		Bounded Lattices	
		Distributive Lattices	
		Complements, Complemented Lattices	

Essential Readings

1. Seymour Lipschutz, Marc Lars Lipson, Schaum's Outline of Theory and Problems of Discrete Mathematics, Third edition, McGRAW-HILL

Reference Distribution

Module	Unit	Essential Reading No.	Chapters	Remarks
I		1	Chapter 4.1-4.5	
II		1	Chapter 4.6-4.11	
III		1	Chapter 14.1-14.5	

IV		1	Chapter 14.6-14.11	

Suggested Readings

1. Seymour Lipschutz; Schaum's Outlines Set Theory and Related Topics, Second Edition; McGRAW-Hill.
2. Ralph P Grimaldi; Discrete and Combinatorial Mathematics An Applied Introduction, Fifth Edition; Addison-Wesley.
3. V K Balakrishnan; Introductory Discrete Mathematics; Dover Publications, INC

Assessment Rubrics

Evaluation Type		**Marks**
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper *	10
b)	Assignment	10
c)	Seminar, Viva-Voce	5
Total		**75**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

** Use of Calculators shall not be permitted.

KU1MDCCMT102: THEORY OF MATRICES

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
I	MDC	100	KU1MDCCMT102	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3		1	25	50	75	1.5

Course Description

This course provides an introduction to matrices. Emphasis is placed on the development of concepts and applications for systems of equations, matrices, determinants, and orthogonality.

Course Prerequisite:

Matrix algebra

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Recognise consistent and inconsistent systems of equations by the row echelon form of the augmented matrix	Understand
2	Able to solve a system of m linear equations in n unknowns using Gaussian elimination	Apply
3	Understand how elementary matrix are used for row operations and find the inverse of a matrix using row operations	Apply
4	Understand the concept 'Rank of a matrix'.	Understand
5	Consistency of a system of linear equations using rank	Apply
6	Understandhow matrices and vectors are used to store data in data science contexts	Understand
7	Understand the role of matrix decomposition in data science	Understand

MODULE	UNIT	DESCRIPTION	HOURS
I		**Systems of linear equations, Row operations**	**11**
	1	Systems of linear equations	
		a) Systems of linear equations	
	2	Row operations	
		a) Row operations	
II		**Gaussian elimination, Homogeneous systems and null spaces**	11
	1	**Gaussian elimination**	
		a) The algorithm: reduced row echelon form Consistent and inconsistent systems	
		b) Linear systems with free variables	
		c) Solution sets	
	2	**Homogeneous systems and null spaces**	
		a) Homogeneous systems	
		b) Null space	
III		**Matrix inversion**	**11**
	1	**Matrix inversion**	
		a) Matrix inverse using row operations	
		b) Row equivalence	
		c) The main theorem	
		d) Using row operations to find the inverse matrix	
IV		**The rank of a matrix, Rank and systems of linear equations, Range**	12
	1	The rank of a matrix	
	2	Rank and systems of linear equations	

		a) General solution and rank	
		b) General solution in vector notation	
	3	Range	

Essential Readings:

1. Martin Anthony and Michele Harvey Linear Algebra: Concepts and Methods,Cambridge University Press 2012.

Reference Distribution:

Module	Unit	Essential Reading No.	Sections	Remarks
I	1	1	Section 2.1	
	2	1	Section 2.2	
II	1	1	Section 2.3	Proof of Theorem 2.17 omitted.
	2	1	Section 2.4	Proof of Theorem 2.21 and Theorem 2.29 omitted.
III	1	1	Section 3.1	Proof of all the theorems in this section omitted
IV	1	1	Section 4.1	Proof of Theorem 4.5 omitted.
	2	1	Section 4.2	
	3	1	Section 4.3	

Suggested Readings:

1) Jeffrey Holt; Linear Algebra with Applications; W.H Freeman & Company; New York
2) T.S Blyth and E F Robertson; Basic Linear Algebra; Springer 2002
3) Charu C Agarwal; Linear Algebra and Optimization for Machine Learning; Springer; 2020
4) Nathen Carter; Data Science for Mathematicians; CRC Press/ Chapman and Hall Handbooks in Mathematics series; 2021.

KU2MDCCMT102: VECTOR ALGEBRA

Semester	Course Type	Course Level	Course Code		Credits	Total Hours
2	MDC	100	KU2MDCCMT102		3	45
Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3		1	25	50	75	1.5

Course Description

This course aims to introduce the concepts of vectors, vector operations, dot product and cross product of two vectors, scalar and vector triple product and applications.

Course Prerequisite

Basic knowledge in Rectangular Cartesian System.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the basics of vectors and vector operations	Understand
2	Comprehend the right- and left-handed systems	Understand
3	Understand dot product, cross product and box product of vectors	Understand
4	Apply the known concepts to illustrate some situations	Understand, Apply
5	Understand miscellaneous applications	Understand, Apply

IV	1	1	Section 10.1, 10.2,10.3.1	

Suggested Readings:

1. H.A. Thaha; Operations Research - An Introduction (10^{th} edition); Pearson

2. G. Hadley; Linear Programming; Oxford & IBH Publishing Company.
3. Richard J. Boucherie, Aleida Braaksma, Henk Tijms; Operation Research - Introduction to Model and Methods; World Scientific.
4. G. Srinivasan; Operations Research - Principles and Applications (Third edition); PHI
5. Michael W. Carter, Camille C Price; Operation Research - A Practical Introduction; CRC Press

Assessment Rubrics:

Evaluation Type		Marks
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper *	10
b)	Assignment	10
c)	Seminar, Viva-Voce	5
Total		**75**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

** **Use of Scientific Calculators below 100 functions (that is, upto *fx 99*) shall be permitted.**

SEMESTER - 4

KU4VACCMT201: CODING THEORY

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
IV	VAC	200	KU4VACCMT201	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	

3			25	50	75	1.5

Course Description:

This course discuss construction of efficient codes using algebraic techniques .Also discuss the theory of linear codes, their encoding and decoding techniques. Cyclic codes are special types of linear codes**.**

Course Pre-requisite:

Basics of Linear Algebra, Abstract algebra and number theory.

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	To understand error detection in coding theory	Understand
2	Able to construct linear codes	Analyse Apply
3	Able to design cyclic codes	Understand Apply, Create
4	Compare different types of linear and cyclic codes.	Analyze, Apply

Mapping of Course Outcomes to PSOs

COURSE CONTENTS

Contents for Classroom Transaction

MODULE	UNIT	DESCRIPTION	HOURS
I		**Introduction,Error detection, correction and decoding**	**11**
	1	a) Communication channels	
		b) Maximum likelihood decoding	

		c) Hamming distance	
		d) Minimum distance decoding	
		e) Distance of a code	
		f) Basics of finite fields and vector space.	
II	**Linear Codes**		**11**
	1	a) Vector spaces over finite fields	
		b) Linear codes	
		c) Hamming Weight	
111	1	a) Bases for linear codes	**11**
		b) Generator matrix and parity check matrix	
		c) Equivalence of linear codes	
IV	**Cyclic Codes**		**12**
	1	a) Definitions	
		b) Generator polynomials	
		c) Generator and parity check matrices	
		d) Decoding of cyclic codes	

Essential reading:

1. San Ling and Chaoping Xing; Coding Theory - A first Course; Cambridge University Press;1983.

Reference Distribution:

Module	Unit	Reference No.	Sections	Remarks
I	1	1	Chapter 1, Chapter 2, Sections 3.1- 3.3	
II	1	1	Sections 4.1- 4.4	
III	1	1	Sections 4.5- 4.7	
IV	1	1	Sections 7.1-7.4	

Suggested reading:

1. R.Lidl and H. Neiderreiter, Introduction to Finite Fields and their Applications, Cambridge University Press,1983
2. F.J Mac Williams and N.J.A Sloane, The theory of error correcting codes, North Holland, Amsterdam, 1998
3. Shu Lin and Daniel J. Costello, Error Control Coding – Fundamentals and Applications, Pearson Education India,2011

Assessment Rubrics:

Evaluation Type		Marks
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper *	**10**
b)	Assignment	**10**
c)	Seminar, Viva-Voce	**5**
Total		**75**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

** Use of Scientific Calculators below 100 functions (ie up to *fx*99) shall be permitted.

KU4VACCMT202: COMPLEX NUMBERS AND THEORY OF EQUATIONS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
IV	VAC	200	KU4VACCMT202	3	45

Learning Approach (Hours/ Week)	Marks Distribution	Duration of

Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	ESE (Hours)
3		1	25	50	75	1.5

Course Description

This course is to introduce Complex Numbers and to understand the nature of roots of an equation.

Course Prerequisite

1. Complex numbers 2. Solving equation.

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of Complex Numbers.	Understand
2	Understand the nature of roots of an equation	Understand
3	Understand the relationship between roots and coefficients of equations	Understand
4	Understand how to find the roots of equations	Understand

Mapping of Course Outcomes to PSOs

CO 7	✓						

COURSE CONTENTS

- **Contents for Classroom Transaction**

MODULE	UNIT	DESCRIPTION	HOURS

I	1	Complex Numbers and their Geometric Representation. Polar Form of Complex Numbers. Powers,Roots.	11
II	1	a) Basic Concepts b) Relation between roots and coefficients c) Symmetric Functions of roots d) Sum of the powers of roots Newton's Theorem on Sum of the powers of roots,	11
III	1	a) Transformations of equations b) Reciprocal equations c) Descartes rule of signs	11
IV	1	a) Multiple Roots b) Sturm's theorem c) Cardon's Method	12

Essential Readings:

1: Erwin Kreyszig; Advanced Engineering Mathematics (Tenth edition); John Wiley; 2011.
2: K. ManicavachagomPillay, T. Natarajan and K. S. Ganapathy; Algebra;SV Publications.

Reference Distribution:

Module	Unit	Essential Reading No.	Sections	Remarks
I	1	1	Sections 13.1,13.2.	
II	1	2	Sections 6.1-6.14	
III	1	2	Sections 6.15,6.16,6.21, 6.24	
IV	1	2	6.26,6.27,6.34	

Suggested Readings

1. S.S. Sastry; Engineering Mathematics, Vol 2 (4th edition); PHI.
2. J.B. Conway; Functions of One Complex Varible (2nd edition); Springer.
3. M.D.Raisinghnia, R.SAggarwal; Algebra;

4. K. H. Rosen; Discrete Mathematics and its Applications (Sixth edition); Tata McGraw Hill publishing company; New Delhi.

Assessment Rubrics:

Evaluation Type		Marks
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper *	10
b)	Assignment	10
c)	Seminar, Viva-Voce	5
Total		**75**

* A student has to appear for at least two written tests. Average mark of best two tests is to be considered for internal mark.

****Use of Scientific Calculators below 100 functions (that is, upto*fx 99*) shall be permitted.**

SKILL ENHANCEMENT COURSES

SEMESTER - 4

KU4SECCMT201: LINEAR PROGRAMMING PROBLEMS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours

IV	SEC	200	KU4SECCMT201	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3			25	50	75	1.5

Course Description:

This course is to introduce the mathematical modeling of industrial problems using the concept of Linear Programming, and different methods to solve them, Assignment problem.

Course Prerequisite:

Elementary Linear Algebra

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Understand a Linear Programming Problem	Understand
2	Formulate a Linear Programming Problem	Understand
3	Apply Graphical method to solve an LPP	Apply
4	Understand Simplex Method, Big M method and Two phase method algorithms	Understand
5	Apply Simplex Algorithm, Big M Method and Two Phase methods to solve an LPP	Apply
6	Understand the various parameters that determine the basic Feasible solution of an LPP	Understand
7	Understand Dual of a primal	Understand

COURSE CONTENTS

Contents for Classroom Transaction

MODULE	UNIT	DESCRIPTION	HOURS
I		**Introduction to Linear Programming**	11
	1	What is a Linear Programming Problem?	
	2	The Graphical Solution of two variable Linear Programming problems	
	3	Special cases	
II		**The Simplex Algorithm**	11
	1	a) How to convert an LP to standard form	
	2	a) Preview of the Simplex Algorithm	
		b) Direction of unboundedness	
		c) Why does an LP have an optimal bfs	
		d) Simplex Algorithm	
		e) Use Simplex Algorithm to solve minimization problems	
III		**Special cases in Simplex method**	
		a) Alternative Optimal solutions	

	1	b) Unbounded LPs	**11**
		c) Degeneracy and the convergence of the Simplex Algorithm	
IV	**The Big M Method and The Two- Phase Method and Duality**		**12**
	1	a) The Big M Method	
		b) The Two- Phase Simplex Method	
		c) Unrestricted-in-Sign	
	2	Finding the dual of an LP	

Essential Readings:

1. Wayne L. Winston; Operations Research; Applications and Algorithms (fourth edition); Thomson(Brooks/Cole).

Reference Distribution:

Module	Unit	Essential Reading No.	Sections	Remarks
I	1	1	Section 3.1	
	2	1	Section 3.2	
	3	1	Section 3.3	
II	1	1	Section 4.1	
	2	1	Sections 4.2,4.3,4.4,4.5,4.6	
III	1	1	Sections 4.7,4.8,4.11	
IV	1	1	Section 4.12,4.13,4.14	
	2	1	Sections 6.5	

Suggested Readings:

1. H.A. Thaha; Operations Research - An Introduction (10^{th} edition); Pearson

2. J.K. Sharma; Operations Research - Theory and Applications; McMillan.
3. G. Hadley; Linear Programming; Oxford & IBH Publishing Company.
4. Richard J. Boucherie, AleidaBraaksma, HenkTijms; Operation Research - Introduction to Model and Methods; World Scientific.
5. G. Srinivasan; Operations Research - Principles and Applications (Third edition); PHI
6. Michael W. Carter, Camille C Price; Operation Research - A Practical Introduction, CRC Press.

SEMESTER - 5

KU5SECCMT301: MATHEMATICAL TRANSFORMS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
V	SEC	300	KU5SECCMT301	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3			25	50	75	1.5

Course Description

This course aims to introduce the Fourier transform, Hankel Transform and, Z transform, its operational properties and applications.

Course Prerequisite

Integral Calculus, Fourier series

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Identify Fourier Integrals	Knowledge
2	Understand Fourier Cosine and Sine Transforms	Understand
3	Apply Fourier transforms techniques in signal analysis	Apply
4	Understand Hankel transform and its properties	Understand
5	Understand Z its inverse transforms and properties	Understand

6	Solve discrete-time signal problems using Z transforms	Apply

MODULE	UNIT	DESCRIPTION	HOURS
I	1	**FOURIER INTEGRALAND TRANSFORMS**	11
		a) Fourier Integrals	
II	1	b) Fourier Cosine and Sine Transforms	11
		c) Fourier Transform (exclude Discrete and Fast Fourier Transforms)	
III	1	**HANKEL TRANSFORMS**	11
		a) Introduction	
		b) The Hankel transform and Examples	
		c) Operational Properties of Hankel Transform	
IV	1	**Z TRANSFORMS**	12
		a) Definition of the Z transform and Examples	
		b) Basic Operational Properties of Z transforms	

		c) The inverse Z transform and Examples	
		d) Application of Z transforms to Finite Difference equations	

Essential Readings:

1. Erwin Kreyzig; Advanced Engineering Mathematics; 9th Edition; John Wiley; 2006.
2. Lokenath Debnath, Dambaru Bhatta; Integral Transform and Their Applications; Second Edition; Chapman & Hall/CRC 2007.

Reference Distribution:

Module	Unit	Essential ReadingNo.	Sections	Remarks
I	1	1	Section 11.7	
II	1	1	Sections 11.8 , 11.9	
III	1	2	Section 7.1- 7.3	
IV	1	2	Sections 12.3- 12.6	

Suggested Readings:

1. Veerarajan T.; Transforms and Partial Differential Equations; 3rd Edition; Tata McGraw-Hill; New Delhi,2012.
2. Ramana B.V.; Higher Engineering Mathematics; 3rd Edition; Tata Mc-Graw Hill; New Delhi; 2010.
3. Larry C. Andrews,Bhimsen K. Shivamoggi; Integral Transforms for Engineers; SPIE Optical Engineering Press

.**Assessment Rubrics:**

Evaluation Type		Marks
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper *	10
b)	Assignment	10
c)	Seminar, Viva-Voce	15

Total	**75**

SEMESTER - 6

KU6SECCMT301: FUZZY SET THEORY

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
VI	SEC	300	KU6SECCMT301	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3			25	50	75	1.5

Course Description

This course aims to introduce the theory of fuzzy sets and discuss theoretical differences between fuzzy sets and classical sets.

Course Prerequisite

Set Theory

Course Outcomes

CO No.	Expected Outcome	Learning Domains
1	Interpret fuzzy set theory and uncertainty concepts	Knowledge
2	Understand basic concepts of fuzzy sets	Understand
3	Identify properties of α cuts	Understand
4	Apply decomposition theorems for representing fuzzy sets	Apply
5	Understand different operations on fuzzy sets.	Understand
